Design Forum International**

“With a high pace of development comes adverse effects on the environment and therefore green architecture is the need of the hour. Green architecture is an approach, which is not only the call of our time, it is our clarion call to respond to nature’s warning,” resonates architect Goonmeet Singh Chauhan. With an active approach towards sustainability, his projects are green, both in application of sustainable design principles and adoption of green building technologies. According to him, with little awareness and minor steps, one can effortlessly contribute towards a cleaner environment. “All building products have environment-friendly measures listed in their product literature, for instance low VOC paints enable better indoor air quality. It is important to read and understand the implications, benefits or possible dangers of the material while making his or her home,” shares the architect.
